

# WINDOWS LPR SPOOLER FOR WIN95

## About Windows LPR Spooler:

Windows LPR Spooler is a program which allows transparent printing from Microsoft Windows 3.1, Windows 95, and Windows NT applications to network printers. WLPRSPL allows you to define a large number of remote printers which may be addressed through different Protocol DLLs.

# **Protocol Libraries:**

WLPR2.DLL which implements the *Line Printer Daemon (LPD, RFC1179)* protocol that is widely used on UNIX hosts.

WJETDIR.DLL which allows printing to HP LaserJet printers or other network printers that accept print jobs being sent to a specific TCP port.

## How the Spooler Works:

WLPRSPL uses a dedicated directory on the PCs hard disk for spooling (i.e. C:\SPOOL). This directory has to be specified the first time you start the program.

## **Installing Microsoft TCP/IP protocol:**

After installing the Microsoft TCP/IP protocol, the following information must be obtained from the Systems Administrator and then used to setup TCP/IP:

- IP Address
- Subnet Mask
- Router Address
- Host Name
- Name Server Address

## **Installing Windows LPR Spooler:**

1. Double click on the Windows LPR Spooler Zip icon.

- 2. A Welcome to the WinZip Wizard! dialog box will appear. Select Next.
- 3. A *Click "Next" to prepare to install* dialog box will appear. Select *Next*. You will see a progress indicator bar extracting the installer to a temporary folder.
- 4. A Click "Install Now" to run the installation program dialog box will appear. Select Install Now.
- 5. A *Specify install directory* dialog box will appear. Select *Continue*. This is the directory where WLPRSPL will reside.

Specify instal	l directory	×	
æ 1	The setup program will copy all components of the program package into the following directory.		
Path:	C:\WLPRSPL		
Setup will also install some files into the WINDOWS\SYSTEM directory. Besides that a new program group will be added to the Program Manager.			
	<u>Continue</u> <u>E</u> xit		

- 6. A *Do you want the program to be added to its own Program Manager Group?* dialog box will appear. Select *Yes.*
- 7. A Specify Program Manager Group dialog box will appear. Select Continue.

Specify Program Manager Group	×		
Please enter the Program Manager group to which the program will be added. This group does not have to exist yet.			
Group name: Windows LPR Spooler			
<u>C</u> ontinue <u>E</u> xit			

- 8. A Do you want the documentation files in PostScript format to be copied to the installation directory dialog box will appear. Select *No.*
- 9. A *Do you want the documentation files in ASCII format to be copied to the installation directory* dialog box will appear. Select *Yes.* You will see a progress indicator bar during the installation.

10. A Setup Complete dialog box will appear indicating a successful installation. Click OK.

Setup complete		×
2	Setup Succeeded!	
Be sure to your new :	send in the registration information for software.	
	<u> </u>	

11. The Windows LPR Spooler directory will display.

## **Printer Setup:**

- 1. Go to *Start/Settings/Printers* and *Add Printer*.
- 2. A *How is this printer attached to your computer?* message will appear. Select *Local printer*. Note: Under Windows 95 only local printers can be connected to the port that WLPSPL creates.
- 3. Finish the printer installation. Make sure the correct PPDs are installed.
- 4. A new printer is created.

- 5. After installation, go to *Properties* for the printer that was just created. Select *Details*.
- 6. Setup Print to the following port and Print using the following driver.
